

and life welfare. The population of this research is the people in Sayati Village, who work in industry. In this study, the determination of the sample based on the purposive sampling method with 50 respondents. The data source of this research is primary data. The research data collection used a questionnaire and made direct observations in Sayati Village, which was then analyzed using comparative descriptive methods. In general, the existence of the industry in Sayati Village has an influence on the socio-economic conditions of the local community, while the results of the research here show that the existence of the doll industry in Sayati Village has a good influence on the socio-economic conditions of doll industry workers compared to before becoming a doll industry worker, including: At the level of income that is owned becomes increased, then at the education level it makes it better from junior high school to high school graduates to also choose a more adequate school place, then at the health level it makes the goal of treatment to be a better place which is also adequate because the income has increased it will but there are still those who are less interested in going to an adequate place on the grounds that buying medicine in a shop is sufficient, and at the level of welfare, life is getting better by being able to meet primary, secondary and tertiary needs, including having transportation equipment. Personal orientation, communication tools as well as other electronic devices are also seen from the ownership status of the residence to become one's own as well as from the permanent building status.

Keywords: Industrial Existence, Conditions Social Economic, Industrial Worker
